

BUNDLING SYSTEMS
CYLASTIC

Cylastic® has been specially developed for the bundling of small, vulnerable products and is attached with the AXRO. The AXRO is equipped with the famous AXRO clamp and knot technique, which has proven itself for years in multiple branches. Both manually and automatically, products can be bundled quickly and economically with elastic from a diameter of 7 mm. The elastic is applied in multiple branches, including the graphical and flowers industry.

- Benefits:**
- Multiple qualities
 - Multiple colors
 - Special elastic for the food industry
 - High elongation, allowing more meters from a role
 - Usable in multiple branches

Features:	Raw material	Core: synthetic or natural rubber, "food approved" Cover: polyester, polyester/PP or bleached cotton
	Field of application	The bundling of small, vulnerable products
	Processing	By binding machines and automatic binding lines
	Shock reserve	Elastic captures shocks and movements by its elasticity, which the elastics are experiencing during transport.
	Outside storage	Elastic is not corrosion sensitive.
	Safety at work	No risk by sharp ends or snapping
	Operational comfort	The roles are light despite decent run-lengths; however, the time for changing the roles is minimal.

Data	Elastic	Cylastic PE	Cylastic PCs 1300	Cylastic 3K
	Breaking strength	55 N	65 N	110 N
	Elongation	240 %	245 %	310 %
